

DMX LA Designer

The **DMX LA Designer** is the control software to realize synchronized kinetic movements with the DMX Linear Actuators. The software offers various textures and generators which first can be developed with the internal 3D visualizer and then applied onto a kinetic structure in real-time.

Additionally, text-, image- and video-based content can be translated into kinetic movements and sensors like Intel RealSense, Kinect and Leap Motion facilitate interactive scenarios.

The **DMX LA Designer** is fully compatible with other software applications like TouchDesigner and Ableton Live, supports protocols like OSC and MIDI for synchronized setups and is customizable for special scenarios.

Technical requirements

- Computer with Mac or Windows OS
- DMX512- or ArtNet-Interface
