

DMX Linear Actuator Heavy

The **DMX Linear Actuator Heavy** is a modular kinetic component to realize large-scale physical variable surfaces or spaces. Offering a variable length with precise positioning, the **DMX Linear Actuator Heavy** can be used to facilitate wide-range spatial animations and synchronized physical shapes.

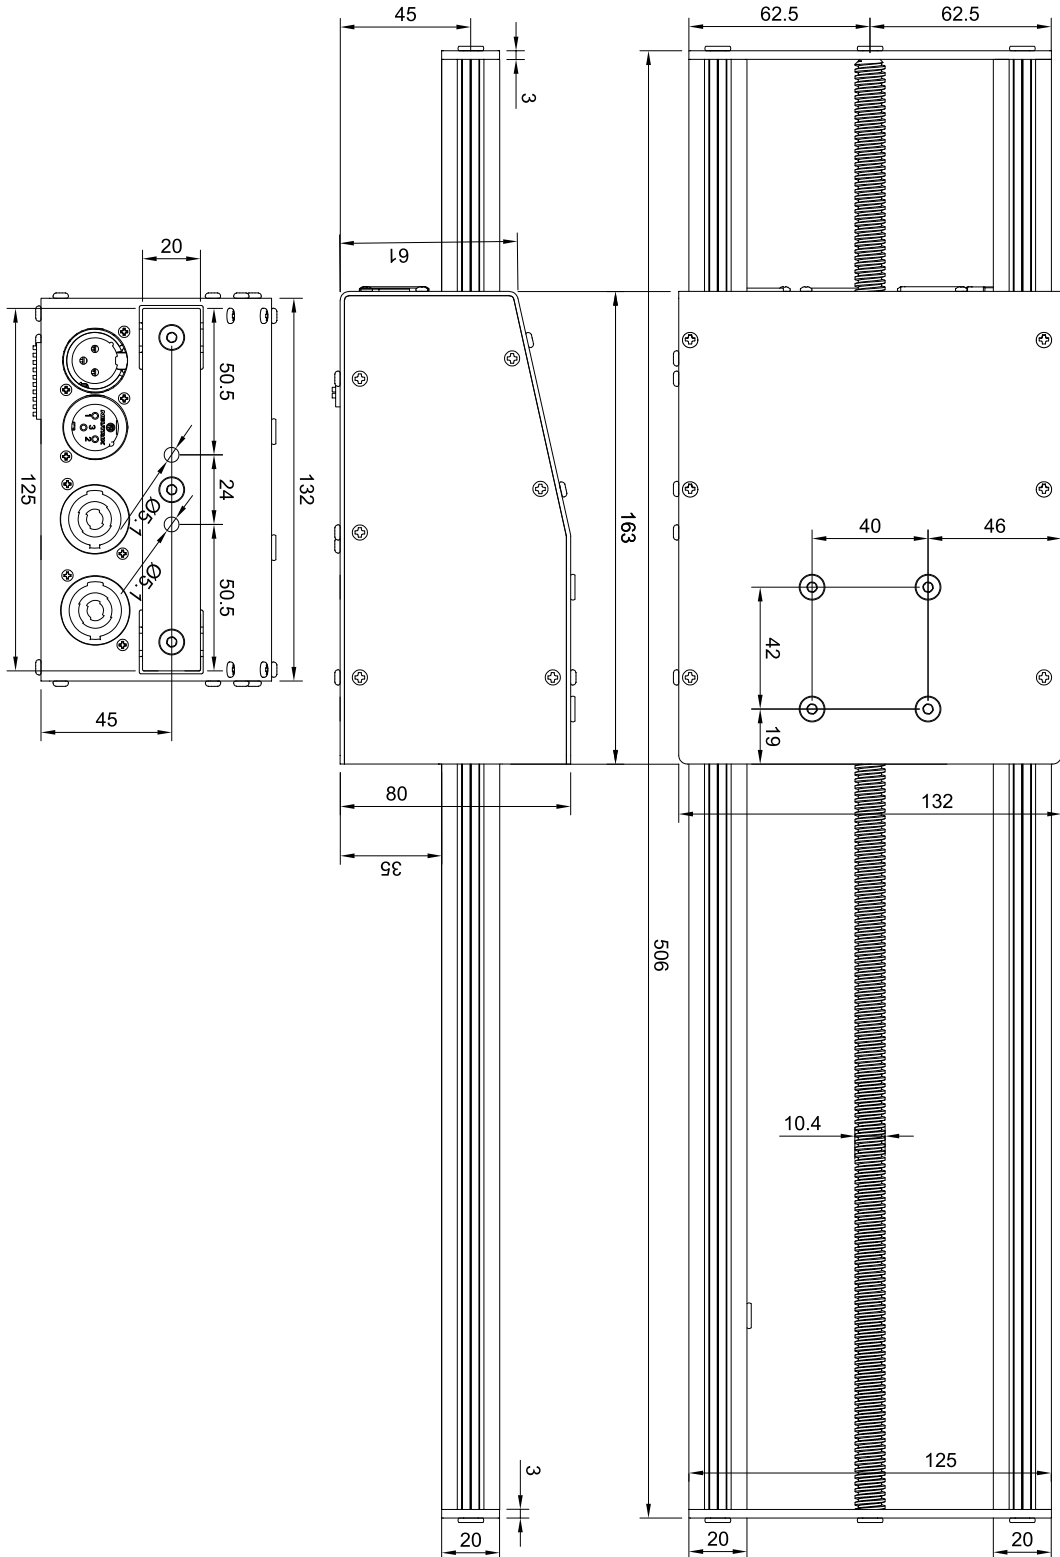

The modular concept of the **DMX Linear Actuator Heavy** allows custom arrays and stacks e.g. together with stretchable fabric, custom fixtures or lighting modules to create imposing, unique kinetic installations.

Technical specification

- 10 – 50cm effective length
- 0.1 – 10kg push / pull
- 0.1 – 12cm/s speed
- 6 DMX channels
- 12 VDC power supply
- Controllable via the **DMX LA Designer** software
- Compatible with software like TouchDesigner, Madrix, MadMapper etc.

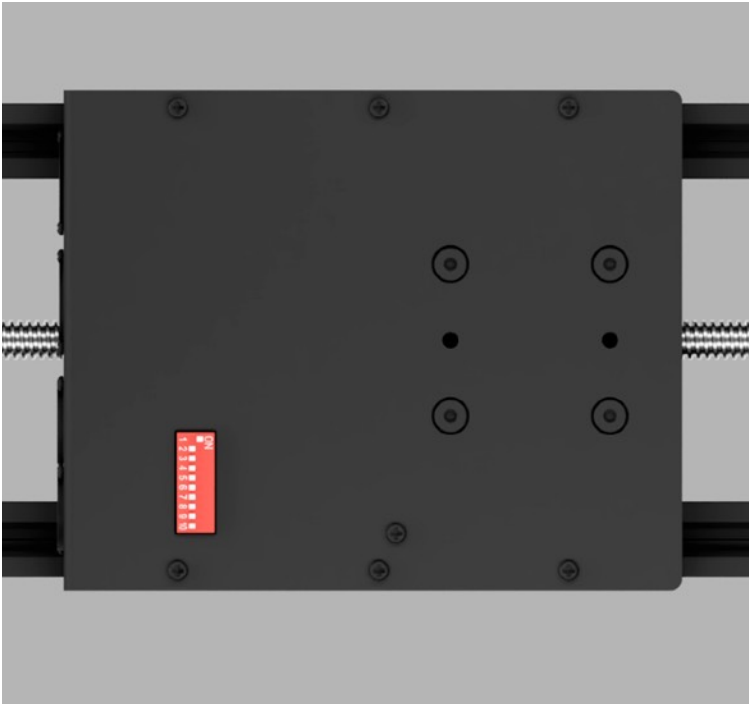

DMX Linear Actuator Heavy

Addressing / Connectivity

- DMX512 compliant addressing
- 6 DMX Channels 8 / 16 Bit
- Channel 1: Position (8 Bit MSB)
- Channel 2: Position (8 Bit LSB)
- Channel 3: Velocity (8 Bit)
- Channel 4: Ramp / Mode (8 Bit)
 - 0 – 127: Fixed velocity mode
 - 128 – 255: Dynamic velocity mode
- Channel 5: Current Mode (8 Bit)
- Channel 6: Reset (8 Bit)
- 10 Bit DIP switch

- 3-pin XLR connectors for
IN / THRU DMX
- Speakon connector for
IN / THRU 12 VDC
